INTERNATIONAL SUBMARINE ENGINEERING Ltd. (ISE) DELIVERS ADDITIONAL EXPLORER AUVs EQUIPPED WITH INNOVATIVE IMAGING SYSTEM

Port Coquitlam, BC, Canada - International Submarine Engineering Ltd. (ISE) has completed the delivery of two of its most current Explorer AUVs. The delivery adds to the fleet of AUVs already delivered by ISE

Kevin Young, ISE Systems Engineer, observes the launch of the latest ISE Explorer AUV during recent sea trials.

to the customer. The latest vehicles have received an exceptionally advanced underwater video/still photo subsystem payload in addition to the multi beam echo sounders and side scan sonars the Explorers already carry. The addition of this new camera system provides exciting new operational capabilities and showcases the ISE Explorer AUVs inherent upgradability and ease of integration of diverse sensor packages to maintain current technology capabilities.

The addition of this digital image collection capability dramatically enhances the broader data set resolution. By integrating acoustic data with digital imagery, the customer will obtain a complete and detailed picture of the seafloor. The completion of the integration work and subsequent successful delivery to the customer illustrate the experience and expertise ISE has acquired in over 4 decades of delivering automated and human occupied systems and tools to the subsea marine market.

International Submarine Engineering Ltd.

ISE, based just outside Vancouver, Canada, was founded in 1974 and designs and manufactures advanced underwater systems and terrestrial robotics. ISE has delivered hundreds of subsea vehicles of various types, over 400 robotic manipulators to more than 20 countries, and assisted in a multitude of additional projects for customers the world over.

The ISE's family of vehicles include ROVs, AUVs, submersibles, semi-submersibles, Mine Countermeasure systems, and additional systems designed to customer specifications for the Naval, Science & Environmental, and offshore Oil & Gas Markets.
